

Instruments for Sensibilization on biodiversity in agricultural systems

Agricultural Biodiversity Check (BCA)

The Agricultural Biodiversity Check examines the effects of pineapple and banana cultivation on biodiversity. The application of the BCA must be carried out by a trained professional. He/she is enabled to generate the dialogue process that leads to the voluntary implementation of measures aimed at the integration of biodiversity into business management.

Target group:

Agricultural consultants, manager of food producing companies and associations

Program for Sensibilization of employees of agricultural enterprises

Raising awareness for agricultural staff of agricultural enterprises on the importance and benefits of ecosystem services associated with biodiversity within the agro-ecosystem and its environment.

Target group:

Employees of agricultural enterprises

Program for Sensibilization of smallholders

Raising awareness for smallholders on the importance and benefits of ecosystem services associated with biodiversity within the agro-ecosystem and its environment.

Target group:

Smallholders

Virtual courses for agricultural consultants

Nature based solutions are presented for increasing the potential for biodiversity in the banana and pineapple production systems.

The online course is divided into four knowledge modules, aiming at enabling agricultural advisors to multiply their obtained knowledge in the field.

Target group:

Agricultural consultants
